Professional Summary:

Addis Enterprises

March 2019 - Present

Programmer

- Built custom websites from scratch using Concrete5
- Prioritized accessibility up to WCAG 2.0 AA standards
- Working both independently and with a team on long term development projects
- Supporting live sites by upgrading them to modern technologies, and responding to bug reports and update requests from clients using Git and FTP
- Working with project managers and clients to develop long term project plans
- Assessed the environment I worked in and offered ideas for possible solutions to existing problems

Matrix – Michigan State University

December 2017 – March 2019

Front-End Developer

- Worked independently on long term development projects to translate designer specifications into new web-based institutional repositories
- Supported live sites by troubleshooting, modifying, and uploading revised code using Git and Svn synchronized across multiple team members
- Practiced the use of enterprise problem management applications to prioritize issues and maintain issue status
- Utilized GitLab and Trello for project management software, integrated with Slack and Mattermost
